

● SENTINEL CORRIDOR OS

Sentinel OS — System Architecture Brief

Deterministic Infrastructure & Cryptographic Execution Rails for Cross-
Border Trade Corridors

DETERMINISTIC

CRYPTOGRAPHIC

ZERO DRIFT

SWIPE TO EXPLORE →

NEED · PLATFORM · OUTCOME

NEED

Manual compliance & settlement risk

PLATFORM

Deterministic state engine & jurisdiction logic

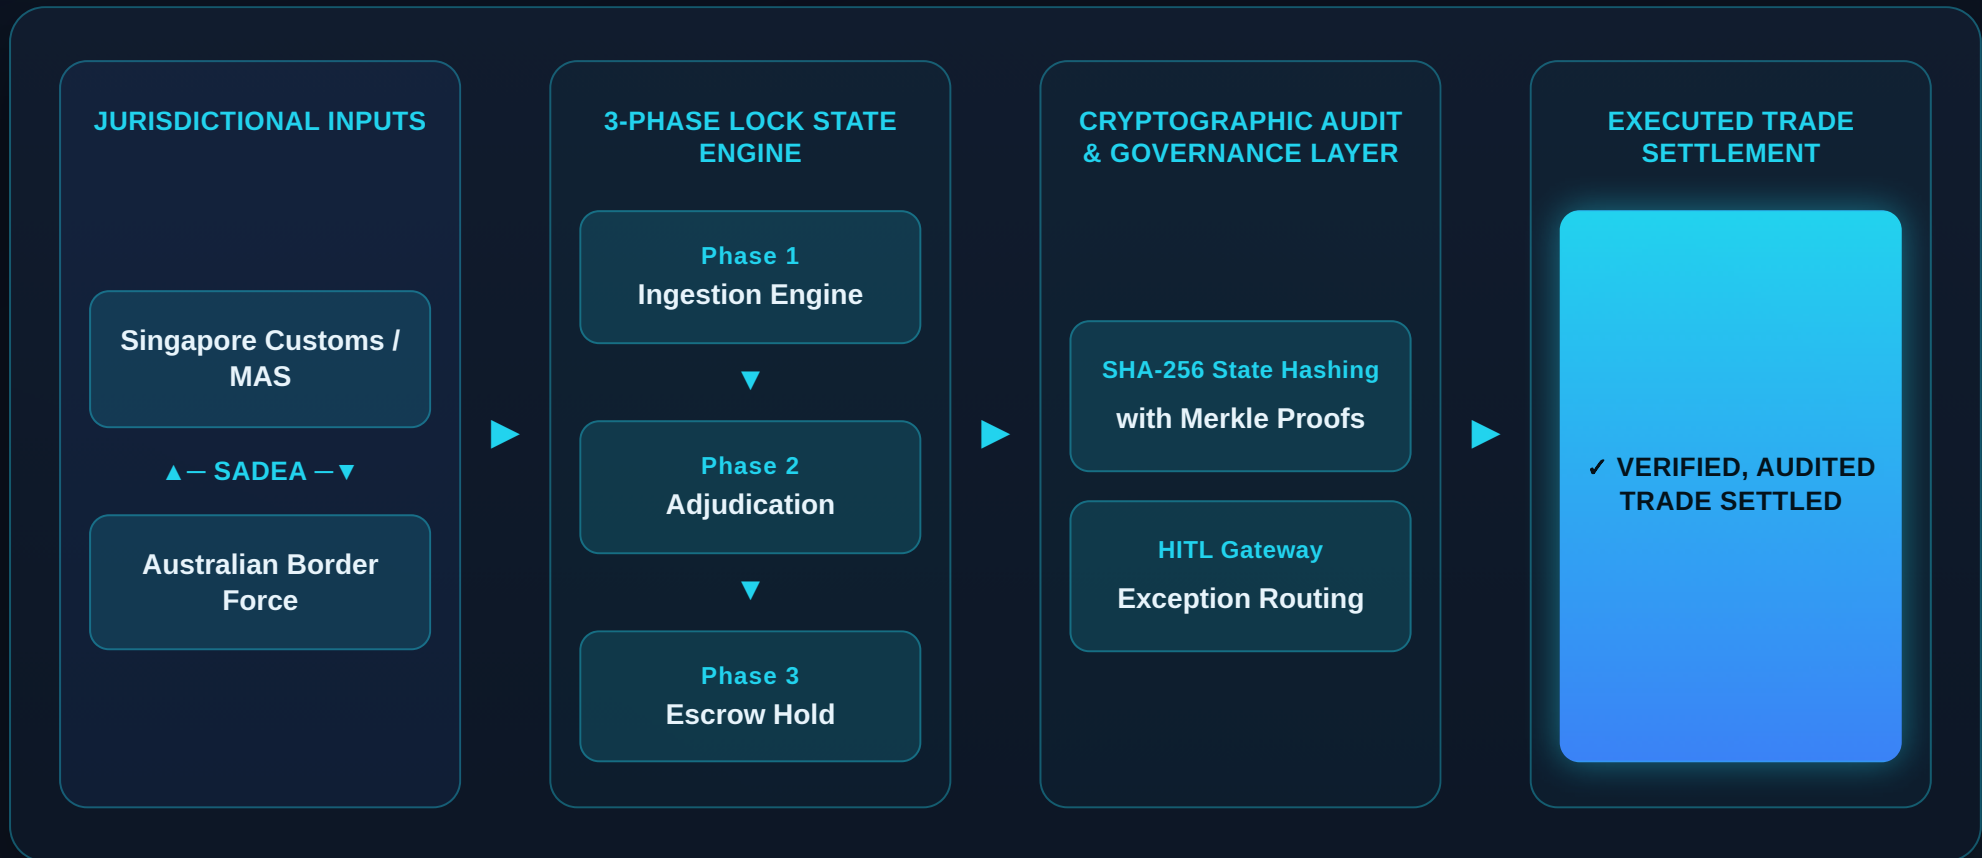

OUTCOME

Verifiable execution with zero ambiguity & zero drift

ARCHITECTURAL OVERVIEW

Sentinel OS converts complex international trade mandates (e.g., SADEA) into deterministic, high-assurance execution rails. By unifying statutory rules with cryptographic state machines, it eliminates cross-border adjudication friction, manual compliance bottlenecks, and settlement risk.

CORE SYSTEM ARCHITECTURE

CORE ENGINE MODULES

MODULE	ARCHITECTURAL ROLE	TECHNICAL FUNCTION
Ingestion Engine PHASE 1	Telemetry & Data Normalization	Ingests multi-jurisdictional trade manifests, identity proofs, and bill of lading telemetry into a standardized schema.
Adjudication Engine PHASE 2	Deterministic Rule Evaluation	Executes statutory verification against legal frameworks without probabilistic AI hallucination.
Escrow Hold PHASE 3	Automated Settlement Safeguard	Locks financial and regulatory clearance pending dual-jurisdiction cryptographic validation.
Audit Ledger	Cryptographic Assurance	Generates immutable SHA-256 hash chains for real-time auditability by customs and banking authorities.
HITL Gateway	Governance & Exception Handling	Routes edge-case statutory anomalies to certified human adjudicators via semantic links.

ENTERPRISE ASSURANCE & SECURITY

Deterministic Execution

Zero probabilistic reasoning in state transition logic; rules evaluate strictly to binary pass/fail states.

Zero-Knowledge Privacy Boundaries

Sensitive corporate trade data remains localized; only cryptographic validity proofs are exchanged across corridors.

Audit Compliance

Instant generation of forensic-grade execution logs for regulatory authorities.

ENTERPRISE ACCESS & STAGING DEMO

INTERACTIVE SANDBOX
